

This installation requires:

- A Conceptronic Bluetooth device
- Conceptronic BT software at least version 1.3.2.7 [Download here from Conceptronic](#)
- ActiveSync at least version 3.5 [Download Here from Microsoft](#)
- A Bluetooth enabled Compaq iPAQ 38xx or 39xx
- Latest System ROM Update for your model iPAQ [Check here for software from Compaq](#)

1. Install ActiveSync with the iPAQ connected to USB or COM port
(The iPAQ needs a Partnership with the computer before you can connect on Bluetooth)

Note:

If you would search the computer in the Bluetoothmanager on the iPAQ you would see that it will crash when you try to find the services on the computer. This has to do with the fact that the Conceptronic Bluetooth devices have profiles for audio. The iPAQ has no support for audio profiles on Bluetooth so you have to swith them off before you can search. To do so follow the next steps:

2. Open the bluetooth environment (double click the BT icon next to your clock)
3. Go to **View My Bluetooth services**
4. Right click **My Audio Gateway** → click **Disable**
5. Right click **My Headset** → click **Disable**
6. Close the bluetooth environment.

Take the iPAQ out of the cradle and do the next steps.

7. Tap **Start** → Tap **Bluetooth Manager** → Tap **Search**
8. The iPAQ will find your computer, **select** the box for your computer and tap **Save**
9. Tap **OK** on the next screen (here you can select groups)
10. Close the search window Tap **Ok** in the corner
11. Tap on the computer icon and **select** the box for ActiveSync partner
12. Tap on **Actions** → **Create bond with this device**
13. Enter a short 4 digit code like **0000**
14. You will now be asked to enter that same code on the computer
15. The computer and iPAQ are now paired
16. Close all the screens on the iPAQ

Now you are ready to check out the right COM port for the ActiveSync connection.

17. Open the bluetooth environment (double click the BT icon next to your clock)
18. Go to **View My Bluetooth services**
19. Right click **My Bluetooth Serial Port** → click **Properties**
20. Here you can see the port that you need for the AciveSync
21. Close the bluetooth environment.

Now set the right port in the ActiveSync settings.

22. Open ActiveSync → Click **File** → **Connection settings**
23. Change the COM port to the port you found in the Bluetooth settings
24. Unselect the other two options!!
25. Click **Ok**
26. Tap on the iPAQ on the **blue icon** in the right corner of the screen
27. Tap **Start ActiveSync**
28. You will be asked to **Allow this action** on the computer, click **Ok**
29. ActiveSync will now synchronize, you can see the icon turn green on the computer
