How to Setup the DMZ option of the C100BRS4
Note!
When you want to forward a certain port to be redirected (forwarded) to a certain computer in the LAN network you first have to configure that computer with fixed TCP/IP settings so you will have one IP to forward the port to that will not change.
Example:

IP   : 192.168.1.200
Subnet mask   : 255.255.255.0
Gateway   : 192.168.1.254
DNS   : 192.168.1.254

1. Login to the router by typing the IP address in your browser

2. Click **OK** (standard = no username and password)

3. Go to **Virtual Server**

4. Fill in the IP of the computer that you like to configure DMZ for
   (like 192.168.1.200 in the example)

| 14 | TCP ⌄ | | ~ | | ---> | 1 |
| 15 | TCP ⌄ | | ~ | | ---> | 1 |

DMZ IP Address: 192.168.1. **200**

IPSec Pass Through Address: 192.168.1.

[Apply] [Cancel] [Help]

5. Click **Apply** to save the settings

The DMZ should now be configured and all ports that are not specified
In the virtual server table will be forwarded to the specified IP address.
