

How-to use the C(54)NETCAM video stream with a web server.

This how-to explains how-to configure your C(54)NETCAM and web server to put the video stream on your website. It is also possible to put a snapshot on your webpage, this is advised when you do not want to have a high data rate on your website or if you have a traffic data limit. The snapshot of the cam will be refreshed when the page is loaded.

Requirements:

- CNETCAM or C54NETCAM
- Browser with Java support.
- Write access to the web server

Make sure that your C(54)NETCAM is configured to the same IP range as your local network. You can configure the C(54)NETCAM with the "Setup Wizard" which is included on the CD-ROM.

We advice to add a web port at which the C(54)NETCAM is operating.

Disclaimer:

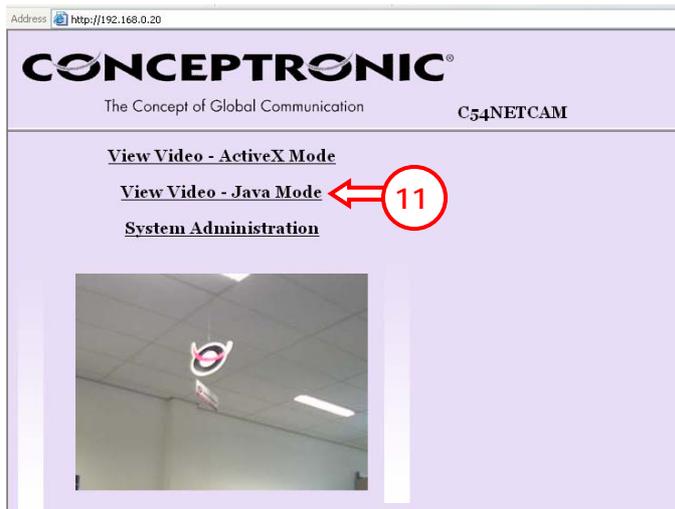

Your data traffic will be higher than normal when you add a video stream to your website. Conceptronic cannot be held responsible for any cost you experience.

The screenshot shows the C54NETCAM web interface. At the top, the address bar shows 'http://192.168.0.20' with a red circle '1' and an arrow pointing to it. Below the header, there are links for 'View Video - ActiveX Mode', 'View Video - Java Mode', and 'System Administration' with a red circle '2' and an arrow pointing to 'System Administration'. A video stream is visible below. The 'System Administration' page is shown below, with a red circle '4' and an arrow pointing to the 'Configuration' tab. The left sidebar has a red circle '5' and an arrow pointing to the 'Configuration' menu item. The 'Configuration' page has several sections: 'Dynamic IP (DHCP)' with radio buttons for 'Dynamic IP (DHCP)' and 'PPPoE'; 'Dynamic DNS' with radio buttons for 'Enable' and 'Disable', and a 'Service Provider' dropdown; 'Second HTTP Port' with radio buttons for 'Enable' and 'Disable', and a 'Port Number' field with a red circle '8' and an arrow pointing to it; and 'UPnP' with radio buttons for 'Enable' and 'Disable'. At the bottom, there are 'Save' and 'Cancel' buttons with a red circle '9' and an arrow pointing to the 'Save' button. A red circle '10' and an arrow point to the 'Home' link in the top right corner.

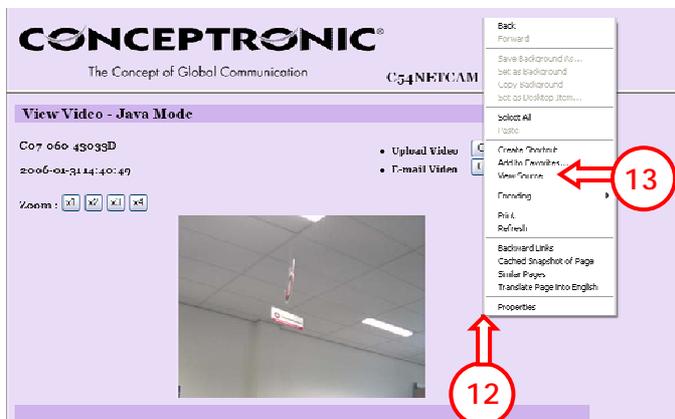

1. Go to the webpage of the C(54)NETCAM (default: <http://192.168.0.20>)
2. Click on "System Administration"
3. If you configured the C(54)NETCAM with a username/password please fill in the username and password to enter the configuration page.

4. Click "Configuration"
5. Click "Network"
6. Scroll down the page
7. Select "Enable"
8. Fill-in the web port you want to use (for example 82)
9. Click "Save"
10. Click "Home"

Copy the source code of the Java video stream

11. Click "View Video - Java Mode"

12. Right click
13. Select "View Source"

14. Save the HTML code to your computer. (File -> Save as.) (For example stream.html)

How-to change the HTML code, when you do not have a domain name on your internet IP-address

To add the video stream to your website you need to change the HTML code, see below how to change it.

Original HTML code:

```
<APPLET name="cvcs" CODEBASE=http://192.168.0.20:82/" ← Your C(54)NETCAM IP-Address  
CODE="xplug.class" WIDTH=320 HEIGHT=240>  
<param name="RemotePort" value=82>  
<param name="Timeout" value=5000>  
<param name="RotateAngle" value=0>  
<param name="PreviewFrameRate" value=2>  
<param name="DeviceSerialNo" value="">  
</APPLET>
```

Change to:

```
<APPLET name="cvcs" CODEBASE=http://xxx.xxx.xxx.xxx:82/" ← Your internet IP-address  
CODE="xplug.class" WIDTH=320 HEIGHT=240> ↑ (for example:  
<param name="RemotePort" value=82> http://123.456.789.101:82/)  
<param name="Timeout" value=5000> The value 82 can change. It is  
<param name="RotateAngle" value=0> the second http port, which  
<param name="PreviewFrameRate" value=2> is set in the C(54)NETCAM  
<param name="DeviceSerialNo" value=""> configuration.  
</APPLET>
```

If you only want to add the video stream, use only the code above.

When you have changed the HTML code, you can put it on your website/web server.

Please notice!:

When you change the http port after you copied the HTML code, then you must change the http port at 2 places. First at the CODEBASE and second at RemotePort. Both values must be the same!

You need to open the port of the C(54)NETCAM in your Modem/router to get a connection with your C(54)NETCAM. For example: Service name: C(54)NETCAM, Protocol: TCP, Public port: 82, Private IP-address: 192.168.0.20, Private port: 82).

How-to change the HTML code for snapshot, when you do not have a domain name on your internet IP-address

To add the snapshot to your website you need to change the HTML code, see below how to change it.

Original HTML code:

```
<APPLET name="cvcs" CODEBASE=http://192.168.0.20:82/" ← Your C(54)NETCAM IP-Address  
CODE="xplug.class" WIDTH=320 HEIGHT=240>  
<param name="RemotePort" value=82>  
<param name="Timeout" value=5000>  
<param name="RotateAngle" value=0>  
<param name="PreviewFrameRate" value=2>  
<param name="DeviceSerialNo" value="">  
</APPLET>
```

Change to:

```
<APPLET name="cvcs" CODEBASE=http://xxx.xxx.xxx.xxx:82/image.jpg" ← Your internet  
CODE="xplug.class" WIDTH=320 HEIGHT=240>  
<param name="RemotePort" value=82>  
<param name="Timeout" value=5000>  
<param name="RotateAngle" value=0>  
<param name="PreviewFrameRate" value=2>  
<param name="DeviceSerialNo" value="">  
</APPLET>
```

↑
IP-address
(for example:
[http://123.456.789.101
:82/image.jpg](http://123.456.789.101:82/image.jpg))
The value 82 can
change. It is the second
http port, which is set
in the C(54)NETCAM
configuration.

If you only want to add the snapshot, use only the code above.

When you have changed the HTML code, you can put it on your website/web server.

Please notice!:

When you change the http port after you copied the HTML code, then you must change the http port at 2 places. First at the CODEBASE and second at RemotePort. Both values must be the same!

You need to open the port of the C(54)NETCAM in your Modem/router to get a connection with your C(54)NETCAM. For example: Service name: C(54)NETCAM, Protocol: TCP, Public port: 82, Private IP-address: 192.168.0.20, Private port: 82).

How-to change the HTML code, when you have a domain name on your internet IP-address

To add the video stream to your website you need to change the HTML code, see below how to change it.

Original HTML code:

```
<APPLET name="cvcs" CODEBASE=http://192.168.0.20:82/" ← Your C(54)NETCAM IP-Address
